

Step 1 - Frame The Problem

STEP 1 — FRAME THE PROBLEM

Project: Zomato Profitability Deep Dive

Author: Muhammed Sinan PT

Last updated: 25 April 2026

Section 1 - Business Model

- **Revenue source 1 - Food delivery services:** Zomato charges restaurants a commission of 18–25% per order. Customers pay a delivery fee (₹30–₹80 depending on distance and surge). This is the oldest and largest segment.
- **Revenue source 2 - Blinkit (quick commerce):** Acquired in 2022 for ~₹4,447 Cr. Operates dark stores to deliver groceries in 10–15 minutes. Revenue comes from product margin and platform fees from brand partners. High capex — each dark store costs ₹50–₹80 lakh to set up.
- **Revenue source 3 — Hyperpure:** B2B supply chain arm. Sells fresh ingredients and packaged goods directly to restaurant partners. Thin margins (~3–5%) but strategic — builds restaurant loyalty and reduces churn.
- **Other revenue sources:** are through restaurants listing and advertising, subscription plans like zomato pro, event booking application Edistrict.
- **Key cost structure:** Delivery partner incentives, customer discounts and Gold membership subsidies, dark store rentals (Blinkit), technology and platform costs, and sales/marketing for customer acquisition.
- **Profitability milestone:** Food delivery segment reached adjusted EBITDA breakeven in Q2 FY24. Blinkit remains loss-making but is narrowing losses as order volumes scale. Consolidated Zomato turned PAT-positive for the first time in FY24.

Section 2 - Hypothesis

- "Zomato's path to sustainable profitability is being slowed by **Blinkit's aggressive dark store expansion** — which requires heavy upfront capex and subsidised delivery — rather than any fundamental weakness in the core food delivery business, which has already demonstrated contribution margin viability at scale. The real question is whether **Blinkit's unit economics** will improve fast enough before cash reserves thin out."

Section 3 - Central Business Question

- "Is Zomato's Blinkit bet a justified **long-term growth play**, or is it a drag that is delaying **overall profitability** — and what does the data say about how to balance both?"

Step 2 - Data Collection

STEP 2 — DATA COLLECTION

Project: Zomato Profitability Deep Dive

MASTER DATA TABLE

—

A. FOOD DELIVERY

Metric	FY22	FY23	FY24
GOV (₹ Cr)	~17,400	26,305	32,224
Orders (million)	~490	647	753
Average Order Value — AOV (₹)	398	407	428
Contribution margin (% of GOV)	1.7%	4.5%	~5.2%
Adjusted EBITDA (₹ Cr)	-766	-10	+912
Adj. EBITDA margin (% of GOV)	-3.6%	~0%	+2.8%
Monthly transacting customers (Mn)	14.7	17.0	18.4

B. BLINKIT (QUICK COMMERCE)

Metric	FY22	FY23	FY24
GOV (₹ Cr)	—	~6,462	12,469
Orders (million)	—	~119	203
Revenue (₹ Cr)	—	1,063	2,301
Adjusted EBITDA (₹ Cr)	—	-1,016	-384
Adj. EBITDA margin (% of GOV)	—	-15.7%	-3.1%
Dark stores (end of year)	—	377	526
Monthly transacting customers (Mn)	—	2.9	5.1

C. HYPERPURE (B2B SUPPLIES)

Metric	FY22	FY23	FY24
Revenue (₹ Cr)	~192	1,506	3,172
Adj. EBITDA margin (% of revenue)	-26%	-13%	-4%

D. CONSOLIDATED

Metric	FY22	FY23	FY24
Total revenue from operations (₹Cr)	~4,192	7,079	12,114
Adjusted EBITDA (₹ Cr)	-1,851	-783	+372
PAT — Profit after tax (₹ Cr)	-1,210	-971	+351
Cash reserves — total (₹ Cr)	—	7,782	12,241

E. PER ORDER ECONOMICS (CALCULATED)

Metric	FY22	FY23	FY24
FOOD DELIVERY			

AOV (₹ per order)	398	407	428
Contribution margin/order (₹)	+7	+18	+22
BLINKIT			
AOV (₹ per order)	—	543	614
Contribution/EBITDA/order (₹)	—	-85	-19

Note: Calculated from $GOV \div \text{orders} \times \text{margin \%}$.

Not directly stated in annual report — derived figures.

Source: FY22, FY23, FY24 Annual Reports.

Section 3 — key insights:

KEY INSIGHTS FROM DATA

Insight 1 — Food delivery turned profitable

- EBITDA flipped from -₹766 Cr (FY22) to +₹912 Cr (FY24).
- Contribution margin improved steadily: 1.7% → 4.5% → ~5.2%.
- This validates the hypothesis — core food delivery is healthy.

Insight 2 — Blinkit losses narrowing fast

- EBITDA margin improved from -15.7% to -3.1% in one year.
- Turned Adjusted EBITDA positive for the first time in Mar-24.
- Dark store target: 1,000 stores by end of FY25 (from 526 today).
- Unit economics are clearly improving with scale.

Insight 3 — Cash grew, not shrank

- Reserves: ₹7,782 Cr (FY23) → ₹12,241 Cr (FY24).
- Zomato generated surplus cash of ₹918 Cr in FY24 itself.
- No cash distress — this challenges the cash runway risk angle.
- Recommendation must account for this strength.

Insight 4 — Food delivery earning 3x more per order in 2 years

- Contribution per order: ₹7 (FY22) → ₹18 (FY23) → ₹22 (FY24)
This is not incremental improvement — this is structural change.
Driven by: higher AOV, better commission take-rates, platform fee introduction (Q2FY24), ad monetization improvement.
- Every additional order Zomato delivers now earns 3x what it did in FY22. This is the engine funding Blinkit's expansion.

Insight 5 — Blinkit loss per order collapsed 78% in one year

- Loss per order: -₹85 (FY23) → -₹19 (FY24)

At this improvement rate, Blinkit reaches per-order profitability in FY25 — exactly matching management's own projection.

- The unit economics trajectory is the most important number in this project. It proves the Blinkit bet is not reckless — it is following a predictable scaling curve.

Insight 6 — The cross-subsidy structure is working

- Food delivery generated +₹912 Cr EBITDA in FY24.
- Blinkit lost -₹384 Cr EBITDA in FY24.
- Net: food delivery is already funding Blinkit's losses with ₹528 Cr to spare — without touching cash reserves.

This is the key strategic finding: Zomato does not need external capital to sustain Blinkit. It is self-funding.

REVISED HYPOTHESIS CONCLUSION:

Original concern — Blinkit is a cash drain on Zomato.

What data shows — Blinkit is loss-making but self-funded by food delivery profits. Cash reserves are growing, not shrinking. The bet is on track. The real strategic question is whether Blinkit can reach 1,000 stores by FY25 end while maintaining the margin improvement trajectory.

Step 3 - Sql + Python Analysis

STEP 3 — SQL + PYTHON ANALYSIS

Project: Zomato Profitability Deep Dive

Author: Muhammed Sinan PT

Last updated: 25 April 2026

Status: SQL complete | Python completed

OBJECTIVE

Use SQL and Python to prove the 6 insights from Step 2 with structured data and visualisations.
Not to show off tools — to tell a business story with data.

TOOLS USED

Database : MySQL 8.0 (MySQL Workbench)
Language : Python (Jupyter Notebook)
Libraries : Pandas, Matplotlib
Output : zomato_analysis.sql + zomato_charts.ipynb

DATABASE STRUCTURE

Database: zomato_analysis

Table 1: segment_annual
year, segment, gov_cr, revenue_cr, ebitda_cr,
orders_mn, aov_inr, cm_pct_gov

Table 2: per_order
year, segment, aov_inr, cm_per_order

Table 3: consolidated
year, revenue_cr, ebitda_cr, pat_cr, cash_cr

SQL QUERIES + WHAT EACH PROVES

QUERY 1 — Food delivery profitability journey

Proves: Insight 1 + Insight 4

→ EBITDA flipped from -766 to +912 over 3 years

→ Earning ₹22 per order in FY24 vs ₹7 in FY22

[

The screenshot shows a SQL query editor interface. The query is as follows:

```
57
58 -- Food delivery profitability journey --
59 • SELECT year,
60       gov_cr,
61       orders_mn,
62       aov_inr,
63       cm_pct_gov,
64       ebitda_cr,
65       ROUND((ebitda_cr / orders_mn)* 10, 2) AS ebitda_per_order_inr
66 FROM segment_annual
67 WHERE segment = 'food_delivery'
68 ORDER BY year;
```

The results are displayed in a table with the following columns: year, gov_cr, orders_mn, aov_inr, cm_pct_gov, ebitda_cr, and ebitda_per_order_inr.

year	gov_cr	orders_mn	aov_inr	cm_pct_gov	ebitda_cr	ebitda_per_order_inr
FY22	17400.00	490.00	398.00	1.70	-766.00	-15.63
FY23	26305.00	647.00	407.00	4.50	-10.00	-0.15
FY24	32224.00	753.00	428.00	5.20	912.00	12.11

QUERY 5 — Cash runway check

Proves: Insight 3

→ Cash reserves grew from ₹7,782 Cr to ₹12,241 Cr

→ Burn status changed to "Cash burn stopped" in FY24

[

The screenshot shows a SQL query editor with a query titled "Query 1". The query is a SELECT statement that calculates the cash runway and burn status for two fiscal years, FY23 and FY24. The query is as follows:

```
108
109  -- Cash runway check --
110  SELECT
111      year,
112      cash_cr,
113      ebitda_cr,
114      CASE
115          WHEN ebitda_cr < 0
116          THEN ROUND(cash_cr / ABS(ebitda_cr),1)
117          ELSE NULL
118      END AS years_of_runway,
119      CASE
120          WHEN ebitda_cr >= 0
121          THEN 'Cash burn stopped'
122          ELSE 'Still burning'
```

The results are displayed in a table with the following columns: year, gov_cr, orders_mn, aov_inr, ebitda_cr, cm_per_order, and cm_pct_aov. The results for FY23 and FY24 are as follows:

year	gov_cr	orders_mn	aov_inr	ebitda_cr	cm_per_order	cm_pct_aov
FY23	6462.00	119.00	543.00	-1016.00	-85.00	-15.7

PYTHON ANALYSIS

File: zomato_charts.ipynb

Status: To be completed

4 charts to build:

Chart 1 — Food delivery EBITDA trend (bar chart)

Chart 2 — Contribution margin per order: Food vs Blinkit (line)

Chart 3 — Cross subsidy EBITDA comparison (grouped bar)

Chart 4 — Consolidated revenue growth (bar chart)

Output: zomato_charts.png (to be uploaded to GitHub)

KEY FINDINGS FROM SQL

Finding 1: Food delivery EBITDA/order: ₹7 → ₹18 → ₹22
Finding 2: Blinkit loss/order: -₹85 (FY23) → -₹19 (FY24)
Finding 3: Net FY24 EBITDA food+blinkit = +₹528 Cr surplus
Finding 4: Revenue growth 71% YoY in FY24
Finding 5: Cash reserves up ₹4,459 Cr in one year
Finding 6: Consolidated PAT turned positive: +₹351 Cr FY24

SQL CONFIRMS: Hypothesis is validated.

Blinkit is a justified bet, self-funded by food delivery.

Cash is not at risk. Unit economics improving on schedule.

STEP 4 — POWER BI DASHBOARD

STEP 4 — POWER BI DASHBOARD

Project: Zomato Profitability Deep Dive

Author: Muhammed Sinan PT

Last updated: 29 April 2026

Status: Complete

OBJECTIVE

Build one interactive dashboard that tells the complete Zomato profitability story visually — from food delivery turnaround to Blinkit trajectory to self-funding structure. A reader should understand the full analysis in 30 seconds.

TOOL AND DATA SOURCE

Tool : Power BI Desktop
Data source : CSV files exported from MySQL
(segment_annual.csv, per_order.csv, consolidated.csv)
File saved as : Zomato_Profitability_Analysis.pbix

DASHBOARD STRUCTURE

Header : Zomato logo + "Profitability Analysis FY22–FY24"
Slicer : Year filter (FY22 / FY23 / FY24)

KPI CARDS (top row):

Card 1 — Total Revenue FY24 : ₹ 12,114 Cr
Card 2 — Adjusted EBITDA FY24 : ₹ 372 Cr
Card 3 — PAT FY24 (First Profit): ₹ 351 Cr
Card 4 — Cash Reserves FY24 : ₹ 12,241 Cr

VISUAL 1 — Food Delivery EBITDA Journey (Bar chart)

FY22: -766 Cr (red)

FY23: -10 Cr (red)

FY24: +912 Cr (green)

Proves: Insight 1 — food delivery turned profitable

VISUAL 2 — Contribution Margin Per Order (Line chart)

Food delivery: ₹7 → ₹18 → ₹22 per order

Blinkit: -₹85 → -₹19 per order
Proves: Insight 4 + 5 — per order improvement story

VISUAL 3 — Can Food Delivery Fund Blinkit? (Bar chart)

FY23: Food -10, Blinkit -1016, Net -1026

FY24: Food +912, Blinkit -384, Net +528

Proves: Insight 6 — self-funding cross subsidy

VISUAL 4 — Gross Order Value Growth (Area chart)

Food delivery: 17,400 → 26,305 → 32,224 Cr

Blinkit: 6,462 → 12,469 Cr

Proves: Scale of both businesses growing

VISUAL 5 — Consolidated Revenue Waterfall

FY22: 4,192 → FY23: 7,079 → FY24: 12,114 Cr

Proves: Company revenue nearly tripled in 2 years

STEP 5 — STRATEGY RECOMMENDATION

STEP 5 — STRATEGY RECOMMENDATION

Project: Zomato Profitability Deep Dive

Author: Muhammed Sinan PT

Date: April 2026

CENTRAL QUESTION

Is Zomato's Blinkit bet a justified long-term growth play, or is it a drag that is delaying overall profitability — and what does the data say about how to balance both?

SITUATION

Zomato (now Eternal Ltd) operates three businesses: food delivery, quick commerce (Blinkit), and B2B supply (Hyperpure). Between FY22 and FY24, consolidated revenue nearly tripled from ₹4,192 Cr to ₹12,114 Cr, and the company reported its first-ever PAT profit of ₹351 Cr in FY24 — a significant milestone after years of losses.

COMPLICATION

The surface-level narrative — "Zomato is finally profitable" — masks a more complex underlying story. Profitability is driven entirely by food delivery, which generated +₹912 Cr EBITDA in FY24. Meanwhile Blinkit continues to lose money (-₹384 Cr EBITDA FY24) as it expands aggressively from 377 to 526 dark stores with a target of 1,000 by FY25 end. The key question is whether this expansion is burning value or building it.

WHAT THE DATA SHOWS

Finding 1 — Food delivery is structurally profitable
Contribution margin per order improved 3x in 2 years: ₹7 (FY22) → ₹18 (FY23) → ₹22 (FY24). Adjusted EBITDA flipped from -₹766 Cr to +₹912 Cr. Driven by higher commission take-rates, platform fee (Q2FY24), ad monetization, and AOV growth from ₹398 to ₹428.

Finding 2 — Blinkit unit economics improving fast
Loss per order collapsed 78% in one year: -₹85 (FY23)
to -₹19 (FY24). EBITDA margin: -15.7% → -3.1% of GOV.
Business turned Adjusted EBITDA positive in March 2024.
Per-order profitability achievable in FY25.

Finding 3 — Food delivery is self-funding Blinkit
FY24: Food +₹912 Cr, Blinkit -₹384 Cr, Net +₹528 Cr.
No external capital needed. Cash reserves grew from
₹7,782 Cr to ₹12,241 Cr — not shrank.

Finding 4 — Blinkit scaling faster than food delivery
Blinkit GOV: ₹6,462 → ₹12,469 Cr (+93% YoY).
Food delivery GOV grew only 22% YoY. Quick commerce
is the faster-growing business and will become the
primary growth driver once profitable.

STRATEGIC RECOMMENDATIONS

RECOMMENDATION 1 — Continue Blinkit expansion aggressively
Data backing: Loss per order at -₹19 is near breakeven.
GOV doubled in one year to ₹12,469 Cr. Unit economics
follow a predictable improvement curve.
Action: Maintain target of 1,000 dark stores by FY25
end. Do not slow expansion — pulling back now means
losing scale precisely when fixed costs are being
absorbed, which is the worst strategic timing.
Impact estimate: Reaching 1,000 stores accelerates
Blinkit breakeven by 2 quarters vs a slower rollout.

RECOMMENDATION 2 — Protect food delivery margin floor
Data backing: Food delivery funds the entire group.
Contribution margin at ₹22/order (5.2% of GOV) is the
engine. Any deterioration threatens the self-funding
structure that makes Blinkit expansion possible.
Action: Set an internal floor of 5% contribution margin
% of GOV as a non-negotiable quarterly target. Reduce
Gold membership delivery subsidies in Tier-2 cities
where competitor density is lower and price sensitivity
is higher — a targeted pullback, not a blanket cut.
Impact estimate: Every 0.5% margin improvement on
₹32,224 Cr GOV = ₹161 Cr additional annual contribution.

RECOMMENDATION 3 — Leverage Hyperpure as Blinkit's

supply chain backbone

Data backing: Hyperpure revenue grew 16x in 2 years (₹192 Cr → ₹3,172 Cr). Its EBITDA margin improved from -26% to -4%. It already supplies restaurants — the same supply chain can serve dark stores.

Action: Route 40-50% of Blinkit dark store grocery replenishment through Hyperpure by FY25 Q2. This reduces dark store replenishment cost per order, improves Hyperpure margins through volume, and creates a supply chain moat competitors cannot easily replicate.

Impact estimate: 10% reduction in Blinkit replenishment cost per order = ~₹6 improvement in per-order economics, accelerating breakeven by 1-2 quarters.

RECOMMENDATION 4 — Monetise Blinkit's ad inventory

Data backing: Food delivery ad monetization is a key driver of its margin improvement. Blinkit has not yet fully developed its advertising platform. With 5.1 Mn monthly transacting customers and 203 Mn orders in FY24, the ad inventory is significant and underutilised.

Action: Launch Blinkit brand advertising platform by Q1FY25 — allowing FMCG brands (HUL, Nestle, ITC) to pay for shelf placement and sponsored search within the Blinkit app. Even at ₹2-3 per order in ad revenue, this adds ₹400-600 Cr annually and directly improves Blinkit's per-order contribution margin.

Impact estimate: ₹3 ad revenue per order on 203 Mn orders = ₹609 Cr additional annual revenue for Blinkit.

RECOMMENDATION 5 — Expand Going-Out segment selectively

Data backing: Zomato launched Going-Out (dining + events ticketing) as its third B2C business in FY24. This segment has zero delivery cost — it is a pure platform play with high margin potential.

Action: Focus Going-Out expansion on top 8 metro cities only in FY25. Do not spread thin across Tier-2 cities before the unit economics are proven. Use food delivery customer data to drive dining recommendations — the cross-sell opportunity from 18.4 Mn monthly transacting food delivery customers to dining is significant.

Impact estimate: If 5% of food delivery customers use Going-Out once per quarter at ₹500 average ticket with 15% platform take-rate, that is ₹690 Cr additional annual GOV contribution at near-zero delivery cost.

RECOMMENDATION 6 — Establish monthly transacting user growth as the north star metric

Data backing: Monthly transacting customers grew slowly

— 14.7 Mn (FY22) → 17.0 Mn (FY23) → 18.4 Mn (FY24).
Only 25% growth in 2 years despite massive revenue growth. This means existing users are ordering more (AOV and frequency up) but new user acquisition is slow. Sustainable long-term profitability requires both.
Action: Set a target of 25 Mn monthly transacting customers by FY25 end. Invest in Tier-2 and Tier-3 city expansion for food delivery — these markets have lower AOV but significantly lower delivery costs and almost no Swiggy competition in many pin codes.
Impact estimate: Adding 6.6 Mn customers at current average order frequency and AOV = ₹11,000+ Cr additional annualised GOV opportunity.

ANSWER TO CENTRAL QUESTION

Blinkit is a justified bet — not a drag.

The data shows a business on a predictable improvement curve, funded by food delivery profits, with no cash distress and 93% YoY GOV growth. The real risk is not Blinkit — it is food delivery margin erosion breaking the self-funding structure.

Zomato's FY25 strategic priority order:

1. Protect food delivery margin (the engine)
 2. Scale Blinkit to 1,000 stores (the growth driver)
 3. Use Hyperpure to cut Blinkit replenishment costs
 4. Launch Blinkit ad platform (near-zero cost revenue)
 5. Expand Going-Out in top 8 metros only
 6. Target 25 Mn monthly transacting users by FY25 end
-

SUCCESS METRICS

Metric 1: Food delivery CM > 5% of GOV every quarter
Metric 2: Blinkit loss per order < ₹10 by Q2FY25
Metric 3: Blinkit dark stores > 800 by FY25 end
Metric 4: Blinkit ad revenue > ₹200 Cr by FY25 end
Metric 5: Monthly transacting users > 22 Mn by FY25
